

Environmental Policy

Bandi is committed to minimising the environmental impact of our textile production. This means taking responsibility for the products we manufacture and recycling them to the greatest extent possible.

We will continuously improve our environmental performance in accordance with relevant laws and standards. This will be achieved through continuous improvement of the company's knowledge of, work on and dedication to environmental issues relating to the company and its stakeholders. We prioritise suppliers, contractors and transport operators who have documented an environmentally conscious approach and can offer environmentally friendly products and services.

We will protect the environment and prevent pollution. This applies both to our own operations and to external suppliers and the logistics solutions employed. Reducing the use of resources by reducing waste and rejects will be a constant focus and permeate the entire operation.
